

Overview

We are pleased to have this opportunity to introduce our company to you. We believe that after reviewing our products, you will also agree how remarkable they are. Our team is a diversified group of professionals with experience in dentistry, manufacturing, dental laboratories, distribution, finance, regulatory affairs, and product development.

Our product development (R&D) efforts have been led under the direction of our chief clinical officer; Dr. Nilo Hernandez. His quest has been to find solutions to some of the long-known problems facing dentists and their patients. During his more than three-decade career, he was baffled as to why no solutions have ever been offered for dentists and their patients.

New Product Evaluation

In 2018, Dr. Hernandez was introduced to a product that was invented by a dentist in the 1980s. Due to health issues of the inventor, the product only received limited use in mainstream dentistry. Although dormant for decades, Dr. Hernandez was given a unique opportunity to evaluate the product. He applied the product to a large group of patients and journaled the treatment of each patient. The ongoing results from clinical observations have been remarkable. Upon the first round of evaluations, it was conclusive that this product was unique and special. As a result, Dr. Hernandez assembled a team who quickly launched Dentity Global our parent company.

Product Development & Application

Our first and original trademarked product is called DentaKote™. Its application is for use with fixed or removable prosthesis. DentaKote works by making

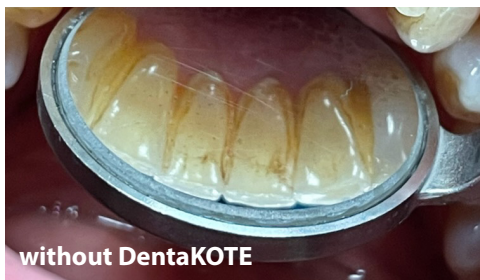

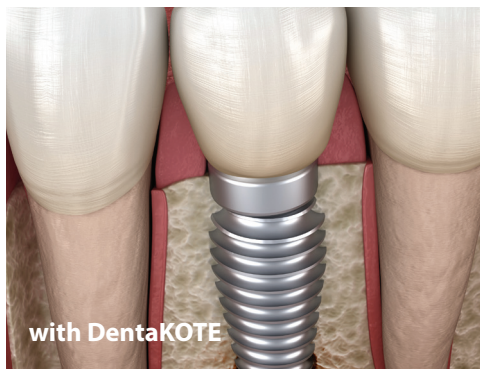

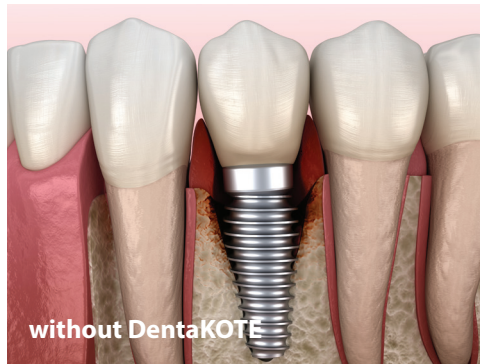

prosthetics less prone to the adherence of tenacious bacterial deposits, which is seen in virtually all cases.

Dr. Hernandez determined that placing DentaKote™ around dental implant bodies and implant prosthesis, that there was also a significant reduction in microbiota. This lowered incidence of accumulations translated to virtually no periimplantitis. This is a major milestone for impantologists and their patients. A significant amount of time and energy has been spent among clinicians and clinical instructors (lecturers) speaking to the importance of how to manage peri implantitis cases. It would obviously be better to prevent the problem in the first case rather than

determining the best way manage it after the fact.

DentaKote™ is also effective when applied directly to natural teeth. This is especially true when applied to the difficult areas where plaque and calculus accumulate. Especially in areas such as the lower anterior teeth and buccal of the upper molars. In monitored clinical evaluations, it became clear that the treated surfaces were slicker (hydrophobic) and less susceptible to microbiota colonization. It was also observed that daily hygiene swept away the majority of what otherwise would have become permanent accumulations.

Additional Products

As Dr. Hernandez saw the effectiveness of the original DentaKote™, it became clear that other products could be produced that would also be effective in managing the damaging effects of microbiota colonization.

The odors that emanate from implants and screw channels (when removing healing or regular abutments) is clear evidence of colonized microbiota. The microbiota is not only foul smelling, but it often causes soft tissue damage, inflammation, and cervical bone loss, which can threaten new work. The solution to this problem is Implaflow™ and Implaseal™, our newest members to the Dentity Global family. Applied as indicated, we have seen a significant reduction in pathogens and an improvement in dental work longevity. This is undoubtedly beneficial for the dentist and the patient.

Although all of the Dentity Global products are amazing, the most impressive might be our DentaKote S™. There is nothing on the market that has the immediate effectiveness or the duration that this product has demonstrated in treating and eliminating the sensitivity associated with root recession.

Dr. Hernandez has applied DentaKote S™ to more than 100 patients and without exception, there has been 100% effectiveness in eliminating root sensitivity. The first treated patient in the doctor’s clinical evaluations was over a year ago and the patient is still without sensitivity. As this is his oldest trial (patient), we are

unsure of longevity beyond this point, but at this time, the DentaKote S™ is still providing this patient (and all patients) complete relief from sensitivity. Given the affordability and simplicity of application, we believe that annual retreatment is advised.

Summary

Our products offer effective and affordable solutions for clinicians, dental laboratories, and patients. We are eager to engage in dialogue with you to show you the benefits of our products and how you can incorporate them into your business model. This brief overview is not meant to be all inclusive or technical. It has been written to provide you with an introductory and high-level overview. In addition to being a remarkable product, it is a good revenue generator for dentists and labs.

For more information, call or email Dr. Nilo Hernandez directly at (239) 293-3961, nilo@DentaKote.com. Looking forward to our conversation.
